**Looking
for the
best lens
drill?**

Look no further than the new E-Lens® Drill! This new C.N.C. drill will interface seamlessly with your lab's host computer software.

With your E-Lens® Drill, you'll save money many ways. You'll reduce labor costs, because it takes fewer steps and less time to produce rimless drilled eyewear. Also, you'll reduce spoilage by preventing costly operator errors.

With your E-Lens® Drill, you'll receive everything needed to integrate it into your lab's existing software and workflow. And even better, the E-Lens® Drill is the only one created and serviced here in the United

States. So if you ever need assistance, you'll get it quickly and easily.

Whether yours is a small retail operation, or the largest wholesale lab, there's an E-Lens® Drill model to fit your needs and budget. **It's the perfect next step to improving your production process and quality of drilled rimless eyewear!**

- Interfaces with all laboratory host software, (DVI, Optifacts, CC Systems, etc). You can even call up a new job while an existing job is drilling.
- Software designed using Microsoft® .NET technology complete with configurable user security profiles and automatic log file creation.
- True 4-axis controlled drilling for precise angle drilling based upon the TRUE base curve of the lens being drilled as reported by the host computer system. This drastically reduces operator input and spoilage.
- Visual lens mapping complete with our exclusive E-Lens® *Lens Morphing Technology*
- Easy one-handed lens-clamping assembly.
- Software automatically downloads new frame data, file updates and backs up data files.
- Software can manage up to 4 drills simultaneously.
- Can be bundled with the patented E-Lens Remote Tracing scanner, allowing the elimination of doctor/office supplied penciled lens tracings.
- Very fast drilling: accurately drill a pair of lenses with 6 holes in less than 2 minutes.
- Three models available, allowing the purchaser to tailor his/her purchase price based upon selected options.
